

Equestrian Rubber

Recycled Rubber Crumb

Repeat Rubber Equestrian arena rubber crumb is a clean safe, resilient material that absorbs impact. Rubber Crumb makes a great difference in a hardness study of arena surfaces, the addition of rubber was found to make the surface more forgiving than an all sand arena. The elastic property of rubber crumb translates into a resilient surface that provides less shock and fewer injuries to horses tendons and joints allowing for increased training time. After adding rubber crumb to the arena horses were found to be less fatigued, horses will move better and freer and with more relaxation, length of stride and suspension. For the horses who are older and a little arthritic, the difference is dramatic. They are instantly so much more comfortable that they move significantly better.

Made from 100% Recycled tyres, 2-5mm irregular shape and is 99.99% wire free, Rubber Crumb is long-lasting in either indoor or outdoor arenas, jumping stadiums, tracks or trails. An ideal footing should provide good traction, cushioning to absorb shock and be non irritating for both horse and rider while minimizing injury to horse and rider. Rubber crumb is suitable for all types of weather and climates, all year round.

Features

- *Reduces Dust & Mud
- *Reduces overall Maintenance
- *Enhances Performance
- *Less Shock & Fewer Injuries
- *Great benefits for older Horses
- * For New or Existing Areas
- *Easy to handle 25kg bags for DIY
- *Full Installation service
- *Will not Rot or Mould
- *Will not Breed Insects
- *Will not Freeze
- *Utilizes Waste Tyres
- *Non toxic
- *99.99% Wire Free
- *2-5mm irregular shape
- *Long Lasting Reducing Costs
