

## Recycled Rubber for Horse Floats & Stables

### Recycled Rubber Tyres for Floats and Stables

Repeat Rubber Equine matting is heavy duty and made of recycled rubber and has been developed specifically for use in horse floats and stables. It contains a specialized bonding agent to ensure its longevity. The ease of installation and non-slip qualities of Repeat Rubbers Horse Float matting makes it unique.

*Eliminates hock sores  
With its slip resistant design it allows your horse to rise up  
with ease  
Reduces fluid accumulation and joint stiffness  
You save your money on bedding, up to 75%, and your  
labour involved by 50% without sacrificing your horses'  
comfort!!  
Pays for itself in approximately 6-12 months*

### Equine Rolls

Transport vehicles need regular maintenance both mechanically and structurally. Non-slip flooring should be provided in floats and trucks. Often a reason for horses "playing up" in floats is that they are uncertain of their footing. Rubber matting is often used on the floor of floats to provide grip, comfort and extra confidence for the horses.

The Equine Matting Roll is available in two thickness 5mm and 10mm, The 5mm is suitable for Horse float tail gates, Stable walls and Arena fences, The 10mm is used in more extreme application such as Horse float floors, Stable floors, Walkways and Wash down bays. The size of the Equine matting roll is 1.2m wide x 10L/m long and is 1000 kg/m<sup>3</sup> density.

We recommend Sikaflex Polyurethane adhesives for all equine surfacing applications. An optional sealer is available.

We offer a wet pour installation service at our premises in Seaford Victoria for horse floats, trucks and trailers.
