

Standard Colour Tiles - Recycled Rubber

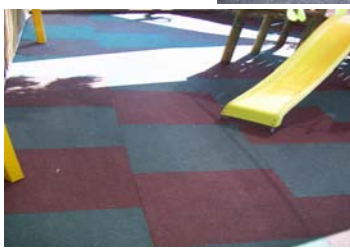

1/ The Prepared Surface is Usually a Crushed Rock or Cement Base.

Standard Colour Tiles

Standard Colour Tile addresses budget restraints for clients requiring quality playground surfacing that meets Australian Standards requirements. Standard Colour Tile provide consistent product thickness, density and performance.

2/ Coloured Standard Tiles are laid down

Standard Colour Tiles

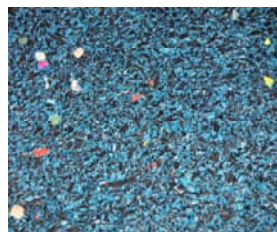

Standard Colour Tiles can be a single tile system or used in our two tile soft fall system to achieve Australian standard fall height requirements. The Standard Colour Tiles are 1m x 1m in size and 15mm thick (Optional 20mm on request) The colours available are Green, Red, and Blue. Heritage Green and Silvery Grey are available on request minimum quantities apply.

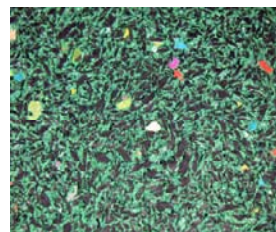

Heritage Green with Rainbow Speckle.

Heritage Red with Rainbow Speckle.

Blue with Rainbow Speckle.

Light Green with Rainbow Speckle.

Silvery Grey with Rainbow Speckle.

Laying & Joining Tiles with Sikaflex is made for the Handyman.

SEALANT - Sikaflex is a medium modulus elastomeric joint sealant/adhesive. It is tough, abrasion resistant, bonds to rubber extremely well and has excellent elongation ability. One component polyurethane which cures to form a durable elastic seal. **Colour:** Black or Red.

JOINT ASSEMBLY - The side of each tile has a 75° reverse undercut bevelled edge that totally removes the edge of the tile to expose raw rubber. Sikaflex polyurethane adhesive is dispensed liberally along the undercut edge which forms a triangular shaped adhesive cavity once the two tile edges are brought together. The cured joint is engineered to provide excellent strength and elasticity during underfoot compression whilst providing strong adhesion to the shockpad layer. The joint allows the system to expand and contract throughout the annual varying thermal conditions which eliminates surface shrinkage fracturing from cold night temperatures.
